THE LAW OF RELATIONSHIP AND INTERDEPENDENCE

performance (photo documentation), 2017

The Law of Relationship and Interdependence – Everything in the universe is connected, it results from each other, it is a process.

The law of relationship and interdependence was a performance inspired by discussions with biologists; reflection on the problem of the interdependence of man and plant at a time when one is strictly dependent on the other.

The idea behind the performance is to emphasize the relationship between man and plant – man provides the plant with heat, moisture and carbon dioxide from his body, while the plant gives man oxygen, thanks to which man can breathe.

Małgorzata Kaczmarek

student at the Studio for Transdisciplinary Project and Research, at the Faculty of Art Education and Curatorial Studies at the University of the Arts in Poznań. She feels best in spatial, social and performative projects, as well as those bordering on science and art. In her works, she tries to refer to the loss and powerlessness understood both at the level of social situations, as well as incomprehension or confusion in relation to scientific and para-scientific issues. For two years, she has been working with researchers from the Faculty of Biology of the Adam Mickiewicz University in Poznań, so that she can speak about humanities through the language of science and about scientific problems through the language of art.
